Prp did handheld air monitoring upwind for worker safety for lel, h2s, o2, and voc. Prp area raes will be onsite in 15 mins for perimeter monitoring. There are no sensitive receptors in the immediate vicinity of the fire. The nearest home is approx 3 plus miles to the north. Facility is surrounded by industry on all four sides. A lot of media attention. Enterprise products (prp) IC is suppressing fire and estimates it will be out in 7 hours (ballpark). EPA resources are enroute. OSC Adams and start Team Lead arrived onsite at approx 1540 and met with Prp IC, Prp Env Rep, and TCEQ. OSC Ruhl (R1) is enroute with additional resources. EPA planned air monitoring includes suma cannisters (grab, 4 hour, and possible 8 hour), and perimeter area raes air monitoring. No aspect operations are planned.
